Intelligent products for smart pool owners.™

AUTOMATIC IN-GROUND POOL CLEANER

# Pool Vac Ultra® Automatic Pool Cleaner for In-Ground Pools

## Plunge Into A Sparkling Clean Pool... Automatically.

### The cleaner that knows where it's going.

The Pool Vac Ultra is truly a smarter cleaner. Employing our exclusive AquaPilot® programmed steering, Pool Vac Ultra systematically attacks every square inch of your swimming pool. Cleaning it faster and far more effectively than the random-pattern movements of unintelligent automatic pool vacuums.

AquaPilot®

In-take throat captures microscopic dust and pollen to larger debris.

### One voracious appetite for dirt and debris.

Pool Vac Ultra features a specially designed intake throat. Which means it can easily vacuum microscopic dust and pollen to larger debris. Taking an even larger bite out of pool cleaning maintenance.

Pool Vac Ultra model 2005C for concrete pools.

Pool Vac Ultra model 2005V for vinyl pools.

### This cleaner has advanced features.

Pool Vac Ultra provides you with easy, trouble-free operation. You never need to empty or replace debris bags. And because it runs off your existing filtration system, you don't need an energy-consuming booster pump.

Durable construction ensures years of trouble-free operation.

### Excellence backed by a heritage of leadership.

When you choose Pool Vac Ultra, you not only select superb technology, you also benefit from the knowledge and commitment that the industry's leading manufacturer can provide. Only Hayward offers swimming pool and spa owners the compatibility of The Total Hayward System™ — a comprehensive, coordinated family of quality-designed and precision-crafted recirculation products.

### Optional Accessories...

The optional Leaf Canister interconnects in-line, trapping leaves and debris before reaching your pool's filter system. Its see-through design lets you know when to empty.

The optional Skimmer Vacuum Plate automatically alternates between vacuuming the pool and skimming the pool's surface with each cycle of the filtration system's time-clock.
