

// NATURE2 SPA PURIFIER

The Nature2 spa purifier is a unique water treatment system using ceramic technology to purify your spa. Like the Nature2 Express its action is based on water passing through the stick, which contains a ceramic bed, impregnated with minerals (silver and zinc). As part of the spas daily filtration cycle, the spa water is passed through the Nature2 spa stick, releasing silver and zinc into the spas water; this works cooperatively with chlorine to provide you with a more refreshing spa.

Key features:

Minerals: used in small concentrations they have no adverse effects on the environment, your health or your pool equipment and actually improve your enjoyment of the spa.

Low maintenance: it moderates the amount of other chemicals that need to be used in your spa helping to maintain pH balance and is not affected by heat.

Easy to install: Nature2 Spa Purifier fits comfortably in most spa cartridge filters and will last for up to four months.
