SPRING START UP FOR ALL POOLS

1. Empty all baskets and ensure all equipment is running correctly and there are no leaks and the pump is fully primed.
2. Brush all of the pool surfaces and vacuum any dust or debris from the bottom of the pool.
3. Ensure that your chlorination system is functioning correctly and if need be take it to Dural Poolsmart for a check and repair if required.
4. Backwash or wash your filter and clean using **BioGuard Filter Brite®**
5. Adjust your chlorinator to the highest level of chlorine output available and adjust run times to a minimum of eight (8) hours per day. If your chlorinator is feeling the effects of age you may need to run for as many as ten (10) to twelve (12) hours per day.
6. Bring a water sample in to Dural Poolsmart to ensure your pool water is correctly balanced.
7. Follow the directions on the water test print out to balance your pool water.
8. Add the recommended dose of **BioGuard Lite®** or **BioGuard Salt Pool Sparkle®** to oxidise any dissolved wastes and establish a 1 to 3 ppm free chlorine residual each week. Use 1 450g packet per 50,000 Liters of pool
9. Add the recommended dosage of **BioGuard Backup II®** or **BioGuard Salt Pool Protector®** to the pool water to help prevent algae growth each month during the swimming season. Use 100ml per 10,000 Liters of pool
10. Add one **BioGuard Super Clear Tab®** directly into the skimmer box per 50,000 liters of pool water each month during the swimming season. Use 1 tab per 50,000 Liters of pool
