# Synergy Pool Care System

syn-er-gy. The action of two or more substances to achieve an effect of which each is individually incapable.

What makes the **Synergy Pool Care System** the leader in pool care technology? First and foremost, the **Synergy System** ensures that pool water is safe, comfortable to swim in, algae-free, and sparkling clear twenty-four hours a day. In addition, the **Synergy System kit** is more convenient than all the other pool care systems on the market as it requires a mere five minutes per week to maintain. No measuring is required and all the components of the system are packaged in one box, so there's less to buy, less to do and more to enjoy!

The **Synergy System** involves two basic steps. The first step is initiating or preparing the **Synergy System** with **Synergy Initiator**<sup>®</sup>. This step only needs to be done once a year. After the water has been initiated, the customer needs to follow the weekly two-part **Synergy System** for maintenance from then on. The two-part maintenance system requires adding **Synergy Tabs**<sup>®</sup> weekly to keep the water clean and algae free, and adding **Synergy Clear**<sup>®</sup> weekly to keep it sparkling.

The main advantage to the **Synergy System** is that once the **Synergy Initiator**<sup>®</sup> has been added there is the one box kit which has everything you need to keep your pool clean and clear for two to four months.

#### Benefits:

- Saves time just 5 minutes once a week
- Saves money
- Keeps pool clean and clear with minimum of fuss
- Less measuring of dangerous chemicals
- Automatic feeder for ease of application

Available in Medium and Large kits
