### WINTERISING FOR ALL POOLS

1. Empty all baskets and ensure all equipment is running correctly and there are no leaks and the pump is fully primed.
2. Brush all of the pool surfaces and vacuum any dust or debris from the bottom of the pool.
3. Ensure that your chlorination system is functioning correctly and if need be take it to Dural Poolsmart for a check and repair if required.
4. Backwash or wash your filter.
5. Adjust your chlorinator to about 60% of the highest level of chlorine output available and adjust run times down to no less than six (6) hours per day. If your chlorinator is feeling the effects of age you may need to run for a longer period each day.
6. Bring a water sample in to Dural Poolsmart to ensure your pool water is correctly balanced.
7. Follow the directions on the water test print out to balance your pool water.
8. Add the recommended dose of **BioGuard Burn Out Extreme®** to burn out any dissolved wastes and help improve filter efficiency over winter. Use 1 600g bag per 50,000 Liters of pool water.
9. Add the recommended dosage of **BioGuard MSA II®** to the pool water to help prevent algae growth each month during the winter season.

Use 100ml per 10,000 Liters of pool water for your initial
